

Thank you for purchasing a Cube & Coroplast Cage from
www.PiggyBedSpreads.com

Contents for your 2x3.5 (27"x50") cage setup:

- 12 Grids to construct the cage
- 1 Coroplast tray, scored and folded
- 20 plastic connectors to connect the grids
- Several cable ties to reinforce grid connectors– Optional

Assemble the frame

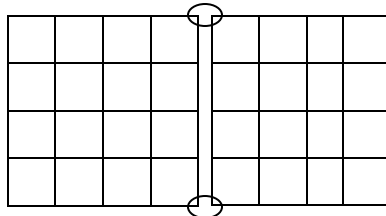

Connect four grids using the plastic connectors as shown. Do this twice and these will be the long sides of your cage.

Overlap the two center grids in half and connect using two or three cable ties.

The connectors on the bottom should be flat to the floor with the “plus” facing up. The top connectors “plus” will face down. You may want to use a rubber mallet to tap the grids into the channels or pliers to squeeze together the grids to make sure they are fully seated.

Now assemble the short sides of the cage using two grids and two connectors as shown below.

Now connect the short sides with the long sides to complete the 2x4 cage. If you find that any of the grids won't firmly seat in the connectors you may want to reinforce the connection with one of the supplied cable ties.

Assemble the Coroplast Tray

Form the sides into a box by securing the flaps to the outside of the “box” with either clear packing tape, double sided tape, or a good quality glue.

Tape or glue the flaps in place.
